Summary

Product Manager with **5+ years** owning product strategy and roadmaps for **AI-native B2B SaaS** in fintech and financial operations, spanning accounts payable automation, identity verification, and fraud and risk management. Own Auditoria.AI's flagship **AP invoice automation platform**, where I led 0-to-1 delivery of **Governed Autonomy**, an agentic framework that lets finance teams guide agents through invoice processing using their own policies and guardrails, and drove the extraction accuracy and business rules programs that lifted documents processed with **zero manual edits from under 10% to over 80%**. Previously led Jukshio's identity verification and fraud detection platform, scaling **digital KYC, KYB, and customer onboarding** to **900M+ identities verified**. **0-to-1** builder with depth in **agentic AI workflows**, LLM product development, human-in-the-loop design, cross-functional leadership, and ERP integration (Workday).

Work Experience

Auditoria.AI - Product Manager Apr 2025 – Present
AI agents automating procure-to-pay and cash cycle operations for enterprise finance teams *Hyderabad, India*

- **First Product Manager hired into the India team**; own the flagship **accounts payable invoice automation platform** end to end across the **procure-to-pay** flow, from intake and AI extraction through validation and ERP write-back, across **34 live customers processing 70K documents a month**.
- **Led 0-to-1 delivery of Governed Autonomy**, an **agentic automation framework** that lets finance teams guide agents through invoice processing using their own **policies and guardrails**: document-level confidence thresholds, configurable validation checks, and **human-in-the-loop** review, all self-service. Live with **12 of 34 customers**.
- **Drove the AI accuracy roadmap** with ML and data science, shipping a **predictive engine that learns from historical documents and analyst corrections**. Raised documents processed with **zero manual edits from under 10% to over 50%**.
- **Built the Business Rules engine 0-to-1**, a **self-serve tool** letting customers configure custom field-population logic against their own business processes and workflows. Lifted zero-edit processing from **50% to over 80%**.
- **Prototyped** features with **AI-assisted coding** (Claude Code) and iterated against customer feedback before engineering commit; the **agent creation wizard** and **AP analyst workspace**, both part of the Governed Autonomy UX overhaul, were redesigned off prototype feedback ahead of build.
- **Built explainability and auditability into agent decisions** across all customers, including a document-level record of why an agent acted as it did, giving finance teams the traceability to approve **autonomous processing, now live at 15 customers**.
- Serve as the **only product manager** on the module across **US and India**, owning requirements, release readiness, and field enablement with engineering, data science, design, Implementation Services, Customer Success, Support, and sales.
- **Shipped platform-level self-service capabilities** including Business Rules, ERP validation failure handling, audit history, and automatic document distribution, **retaining 7 at-risk enterprise accounts and unlocking 4 upsells**.

Jukshio - Product Manager Nov 2020 – Apr 2025
AI-powered identity verification and fraud detection B2B SaaS platform for BFSI *Hyderabad, India*

- **Owned the roadmap and full product lifecycle** for an AI-powered **identity verification and digital KYC** platform in a regulated market, scaling it to **900M+ identities verified across India** and shipping the coverage and compliance capabilities behind **35% ARR growth**.
- **Launched DFraud 0-to-1**, an AI-powered fraud detection product, from concept through **GTM**, securing **25+ POCs** with marquee BFSI customers of which **5 converted to paid**.
- **Expanded** platform coverage across **KYC, KYB, AML screening, Video KYC, and document verification**, and launched an **alternate-data risk product** surfacing early warning signals on customer identities, opening banking, lending, NBFC, insurance, and telecom.
- **Ran** the **product-led growth** freemium motion and rebuilt onboarding to self-serve, cutting setup for platform testing **to minutes** and driving **40+ freemium signups at a 15% paid conversion**.
- **Drove product marketing and thought leadership** through webinars, industry seminars, and blogs, with work featured in **TechGig** and **StartupTalky**.
- **Led the 0-to-1 build of SALEARN Tech**, an AI-powered education platform incubated at Jukshio, with **6 engineers and 1 designer**: 3 initial customers, **1,500+ users, 1,000+ DAUs, and 90% engagement** within 6 months of launch.

Education

SRM Institute of Science and Technology Chennai, India
B.Tech, Electronics and Communication Engineering, 86.78% *Jun 2020*

Skills

AI & ML Product: LLM-based features, agentic workflows, human-in-the-loop design, RAG / retrieval grounding, prompt engineering, model fine-tuning, evals and accuracy measurement, document extraction (OCR/NLU), explainability and auditability, Responsible AI guardrails

AI Tooling: Claude Code, Cursor, Grok Bot, Lovable; AI-assisted coding and rapid prototyping

PM Tooling: Jira, Confluence, Miro, Figma, Notion, Gamma, Granola, Excel

Certifications and Publications

Product Management Launchpad, Airtribe (Apr 2023): **2nd Rank Overall** and **Top Performer, Capstone Project**, in a cohort of 90.
Publication: SV-NET: A Deep Learning Approach to Video-Based Human Activity Recognition - Springer AISC, Vol 1182 (Jun 2020).
